CONM CONSTRUCTION ESTIMATING
Outline of Instruction

Course Information
Organization  Monroe County Community College, Applied Science and Engineering Technology
Development Date  11/10/2008
Course Number  CONM 244
Potential Hours of Instruction  45
Total Credits  3

Description
This course covers the processes used to tabulate accurate construction cost estimates. Quantity survey techniques are used the determine equipment, labor and material costs. A detailed cost estimate and bid package will be developed using computer data base and estimating software. Conceptual Cost Estimating is introduced.

MAJOR UNITS:
1. Calculate quantities for common construction materials.
2. Develop costs associated with labor.
3. Develop equipment and material costs
4. Interpret specificatons General Conditions.
5. Concepts of overhead and profit
6. Create detailed bid packages with computer software

Textbooks

Learner Supplies
Architect scale. **Manufacturer:** any. **Quantity:** 1.

USB portable memory, 512 MB. **Manufacturer:** any. **Quantity:** 1.

Prerequisites
CONM 101
CONM 110

Exit Learning Outcomes
Program Outcomes
A. Analyze, interpret and understand the fundamental processes used to create project designs and construction documents.

B. Define the roles, relationships and responsibilities of the participants in the design and construction process.

C. Use clear and effective written and oral communication methods to facilitate interaction with all project team participants.

D. Accurately quantify materials required for project construction.

E. Interpret construction documents to accurately predict project costs and assign resources.

F. Operate industry-standard software for computer-aided design and drafting (CADD), project cost estimating, and project scheduling.

General Education Outcomes
A. Apply mathematical approaches to the interpretation of numerical information
B. Use computer technology to communicate information

Course Outcomes
1. Create accurate bid packages.
2. Calculate bid quantities for common construction materials.
3. Develop project costs associated with labor.
4. Develop equipment costs.
5. Describe conceptual estimating techniques.
6. Apply concepts of overhead and profit.
