Ultrasonic Testing (UT) Level II
Outline of Instruction

Course Information
Project Type: NDT Certification
Organization: Monroe County Community College, Applied Science and Engineering Technology
Developers: Ed Schultz and Roop Chandel
Development Date: 2/7/2012
Course Number: NUET 108
Instructional Level: Certificate
Instructional Area: Nuclear Engineering Technology
Division: Industrial
Potential Hours of Instruction: 45
Total Credits: 2

Description:
This is the continuation of the Level I course. However, the same aspects are studied at a higher level of difficulty and responsibility. The principles of sound wave propagation and attenuation, generation, nature, types and properties of sound waves and modes will be studied. Testing methods and techniques, responses from a variety of flaws, equipment and its operating principles to detect flaws by using different detectors will be taught during the practical sessions. Standard reference blocks and calibration will be used. Procedure and codes for acceptance and rejection criteria for flaws will be taught.

Major Units:
1. A, B, & C-Scans
2. Evaluation of base material and product forms
3. Discontinuity detection and evaluation
4. Comparison procedures
5. Phased array
6. Report writing
7. Testing to customer requirements

Target Population
NDT Certification is designed for two year career and technical education programs or for those with experience.

Students, Inspectors, Welders, CWI's, Technicians, Engineers and Electricians find that a career in nondestructive testing offers many opportunities, and there is a big demand for technicians and engineers trained in NDT. The NDT personnel work at various levels.

Level I technicians are only qualified to perform specific calibrations and tests, and acceptance or rejection determinations allow little or no deviation from the procedure. Level I technicians working at this level are under close supervision, guidance and direction of a higher level tester, such as Level II or Level III. The Level I position is not the trainee level, but the first level a trainee reaches upon demonstrating ability in specific tests. They are usually trained to a specific procedure and can perform only certain types of inspections on a certain set of components.

Level II technicians are able to set up and calibrate equipment, conduct the inspection according to procedures, interpret, evaluate and document results in all the testing method(s) utilized by the certificate
holder. The technician can provide on the job training for Level I and Level I Limited and act as a
supervisor. The technician at this level can also organize and document the results of the inspection.
They must be familiar with all applicable codes, standards, and other documents that control the NDT
method being utilized.

Textbooks

TBD.

Learner Supplies

Calculator.
3-Ring Binder.

Prerequisites

NUET 107

Exit Learning Outcomes

Program Outcomes

A. Demonstrate problem solving skills
B. Acquire a willingness to learn independently
C. Recognize effective inspection techniques
D. Demonstrate knowledge of equipment competency
E. Apply technical writing skills

General Education Outcomes

A. Communicate information in writing using the rules of standard English
B. Use computer technology to communicate information
C. Demonstrate an understanding of the process of scientific inquiry

External Standards

SNT-TC-1A, The American Society for Nondestructive Testing, Recommended Practice, Personnel
Qualification and Certification in Nondestructive Testing

Course Outcomes

1. Demonstrate an in-depth understanding of the ultrasonic testing (UT) inspection method
2. Identify ultrasonic inspection techniques and process variables
3. Select the tools and set ups for UT method
4. Demonstrate competency in the scope and limitations of the UT methods
5. Prepare reports describing test results
6. Prepare for the ANST UT Level II test battery
